

**METABOLIC DYSFUNCTION-ASSOCIATED
STEATOHEPATITIS (MASH)**

NASH FibroSure® Plus

Enhance your MASH management
with clearer answers.

NASH FibroSure® Plus is a noninvasive, blood-based diagnostic that provides a comprehensive assessment of metabolic dysfunction-associated steatohepatitis (MASH).

By analyzing 10 key biomarkers, the test quantifies and scores three critical features—**fibrosis**, **steatosis** and **steatohepatitis**—improving personalized care, earlier intervention and greater confidence in treatment planning.

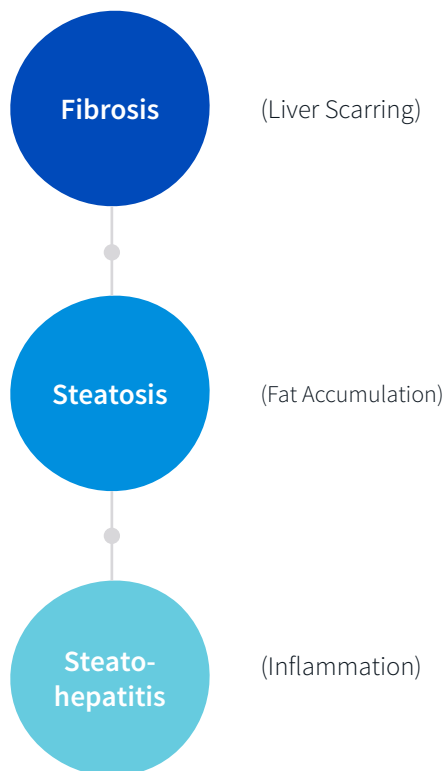

A silent epidemic in liver health

Approximately 1 in 4 U.S. adults are affected by metabolic dysfunction-associated steatotic liver disease (MASLD), driven by rising rates of obesity and metabolic syndrome. MASLD can silently progress to MASH—formerly NASH—without symptoms, often resulting in advanced liver damage before diagnosis.

Timely, noninvasive testing like **NASH FibroSure® Plus** helps assess and manage individuals at risk of progressive liver disease, potentially before it causes irreversible harm.

Detect disease earlier

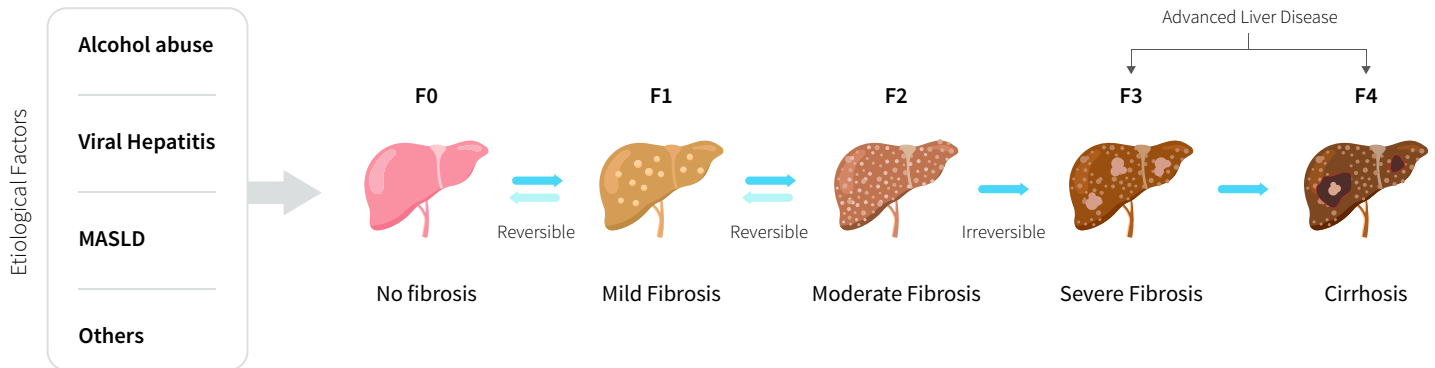

NASH FibroSure® Plus is the only test that generates distinct scores for:

Why it matters

Identification of individuals likely to progress to advanced liver disease is crucial for patient care and overall population health. Given that MASLD is a consequence of metabolic syndrome, guidelines recommend identifying advanced fibrosis in high-risk individuals—those with cardiovascular disease, Type 2 diabetes and obesity.

Stages of Liver Fibrosis

10 biomarkers, 3 critical scores

This blood-based diagnostic analyzes the following validated biomarkers:

- Alpha-2-macroglobulin
- Haptoglobin
- Apolipoprotein A1
- Total bilirubin
- Gamma-GT
- Alanine aminotransferase (ALT)
- Aspartate aminotransferase (AST)
- Fasting glucose
- Cholesterol
- Triglycerides

Each score correlates with histopathological staging aligned with MASLD/MASH guidelines.

Built to inform your decisions

NASH FibroSure® Plus offers a more streamlined testing process to support your decision-making.

- Clear visibility into disease progression
- Earlier opportunities for clinical intervention
- Results that guide lifestyle and treatment adjustments

Fast, accessible and actionable insights

- Simple serum collection
- No need for BMI in scoring
- Compatible with routine clinical workflows

Test Name	Test No.
NASH FibroSure® Plus	550960
NASH FibroSure® With Reflex to Enhanced Liver Fibrosis (ELF)™	550978

With NASH FibroSure® Plus, you get timely insights,
so you can act early and with confidence.
